

## The 'invisible door' for shops, offices, restaurants, malls and other industrial and commercial outlets

- Keeps the heat out of cool airconditioned interiors
- Keeps the cold out of heated environments
- Prevents the entrance of dust, odours, fumes and insects
- Provides considerable energy savings

Mounted above entrance doors, an Alliance Air Curtain acts as an invisible shield separating the indoor environment from the exterior, yet allowing your door to stay invitingly open for customers.

Directing a virtually silent sheet of air vertically downwards, an Alliance Air Curtain ensures excellent interior climate control, thus providing a comfortable environment as well as significant energy savings in terms of airconditioning. The unit itself consumes minimal energy – less than three 100W light bulbs! A High/Low switch control allows variation of air volume.

Easy to install and maintain, the Alliance Air Curtain is available in 3 widths: 900mm, 1200mm and 1500mm. For wider apertures, several units can be mounted side-by-side to provide a continuous air curtain.

Model	Dimensions (mm)	Voltage	Input Power(W)	Air Volume (m <sup>3</sup> ) High	Air Volume (m <sup>3</sup> ) Low	Air Velocity	Net Wt (kg)
